

MIND MAPPING

And stuffs

DESIGN QUESTIONS

- I wish that I was waiting at my home instead of waiting for my friend who lied to me that he was coming, but he didn't.
- I wish that I knew member's situation so I can plan my schedule and utilize time more efficient.
- I wish that I knew my member's location in real time so I can find them easier.

HOW MIGHT WE?

How might we

develop an application that organizes the
meeting events and notified relevant
information?

CHALLENGES

Technical issues

- Advance Programming (Application)
- UX/UI Design

User's need

- User Experience
- Requirements

GOALS

An application that helps people manage meeting events.

Synchronize outdated information in communication.

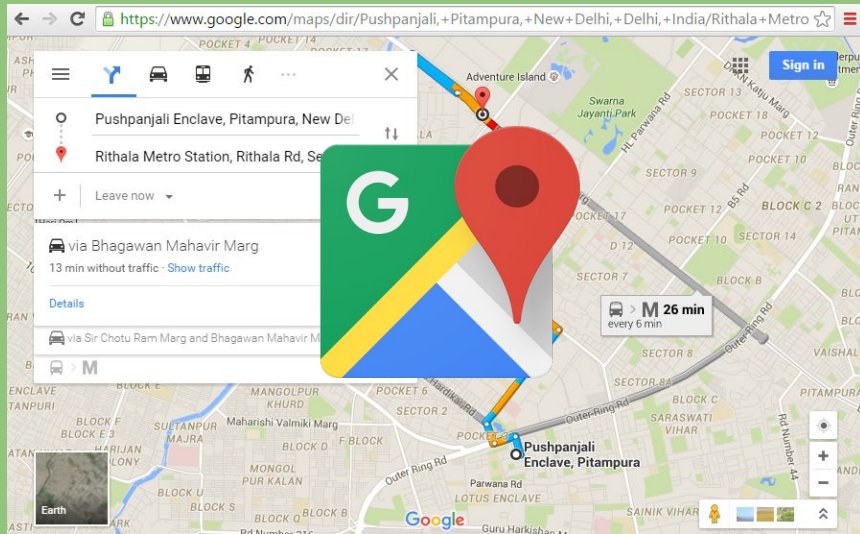

DESIGN STATEMENTS

I am exploring
outdated meeting information between members
because I want to find out
how people interpret messages or get confused
in order to
meet people easier and decrease misinformation among colleagues in a meeting group.

I will be approaching this project from the lens of a
Digital Application.

RESEARCH

Google Map API.

User Experience.

PERSONAS

MERRY

23-33 Female living with friends

“I never missed any meeting once”

- Punctual
- Prepared
- Earnest

PERSONAS
